

AI-Based Early Warning & Landslide Risk Monitoring Platform in NER

Minist

1. THE REGIONAL CHALLENGE

The North Eastern Region (NER) of India accounts for >60% of India's landslide severances during the monsoon season. Steep terrain, fragile tectonic geology (Seismic Zone V), and cloudbursts (>260mm/48h) frequently collapse lifelines like NH-10 (Sikkim Lifeline) and SH-5 (Meghalaya Sohra). Current early warning systems fail due to coarse district boundaries (15-25 km), total communication blackout during storm cable cuts, lack of localized field verification, and zero road-isolation impact intelligence.

2. THE SOLUTION: HYBRID CLOUD-NATIVE & OFFLINE-FIRST LIFELINE

- Hybrid Physics + GeoAI Engine:** Couples slope mechanics (Dynamic Factor of Safety FoS) with XGBoost and PyTorch LSTMs, fusing Sentinel-1 InSAR surface displacement (-28mm/yr creep) with IMD Doppler radar and 30m Digital Elevation Models.
- Offline-First PWA (Zero Network Loss):** Service Worker + IndexedDB caching layer keeps Esri map tiles and alerts alive during complete cell tower failures. Citizen hazard reports queue locally and auto-sync in the background upon reconnection.
- Crowdsourced Video & Photo Reporting:** Enables locals and scouts to upload geo-tagged photos or short video clips (15-20s) with 1-click GPS auto-detection and automated AI spatial-correlation validation.
- Road-Isolation Graph Intelligence:** Derives cut-off Himalayan hamlets and affected populations for every blocked highway corridor (e.g. NH-10: 5 hamlets cut off, 18,400 residents isolated) with dynamic detour advisories.
- Multi-Horizon Weather Nowcast:** Interactive Recharts dual-axis projection correlating precipitation rate (mm/h) against Landslide Susceptibility Index (0.0-1.0) across 6h Nowcast, 24h Cumulative, and 48h Outlook.
- Multi-Channel Dispatches & Voice Alerts:** Features Web Audio siren synthesizer, NDMA CAP v1.2 SMS simulation, browser Web Speech API spoken audio bulletins, and 5 languages (English, Hindi, Assamese, Bodo, Khasi).
- Continuous Learning Retraining Loop:** Officer interface to mark alerts as Confirmed (TP), False Alarm (FP), or Missed Event (FN), logging into feedback_log for automated AI fine-tuning.

3. QUANTITATIVE IMPACT & INNOVATION BENCHMARKS

Metric	Traditional Systems	Our Cloud-Native Platform (SIH 2026)
Warning Lead Time	0 - 30 minutes (Often post-event)	3.5 - 6.0 Hours Advance Lead Time
Spatial Granularity	District level (15 - 25 km)	Slope & Road-Segment Level (30 meters)
Network Blackout	100% Online only (Fails in storms)	Offline PWA + IndexedDB Queue (Zero Data Loss)
Ground Validation	Delayed 24 - 48 hours	Real-Time Citizen Photo & Video with Auto-GPS
Linguistic Reach	English / Hindi text only	5 Languages (EN, HI, AS, Bodo, Khasi) + Spoken Audio
Tile Licensing Cost	Expensive commercial API keys	100% Watermark-Free Esri Dark Gray Vector GIS

4. GOVERNMENT DEPLOYMENT READINESS (NIC MEGHRAJ & SDMA)

Containerized Docker microservices engineered for rapid staging on the National Informatics Centre (NIC) MeghRaj Cloud. Ready for immediate webhook integration with SDMA Meghalaya, Sikkim, Assam, the Border Roads Organisation (BRO), and NDRF battalions.
